REDESIGNING THE ESHOPBOX REVENUE ENGINE

From a routine metric drop to a complete CRM and sales-ops transformation.

The Trigger: Investigating a drop in conversion rates and pipeline leakage.

NotebookLM

THE PIPELINE LEAKED AT EVERY ORGANIZATIONAL BOUNDARY

Marketing:

Optimizing in the dark.

Zero visibility into which channels drive actual revenue.

Sales:

Burning out from hunter/farmer context switching.
Misaligned incentives driving bad deals.

Onboarding:

Manual retyping of CRM data into the product.

High friction.

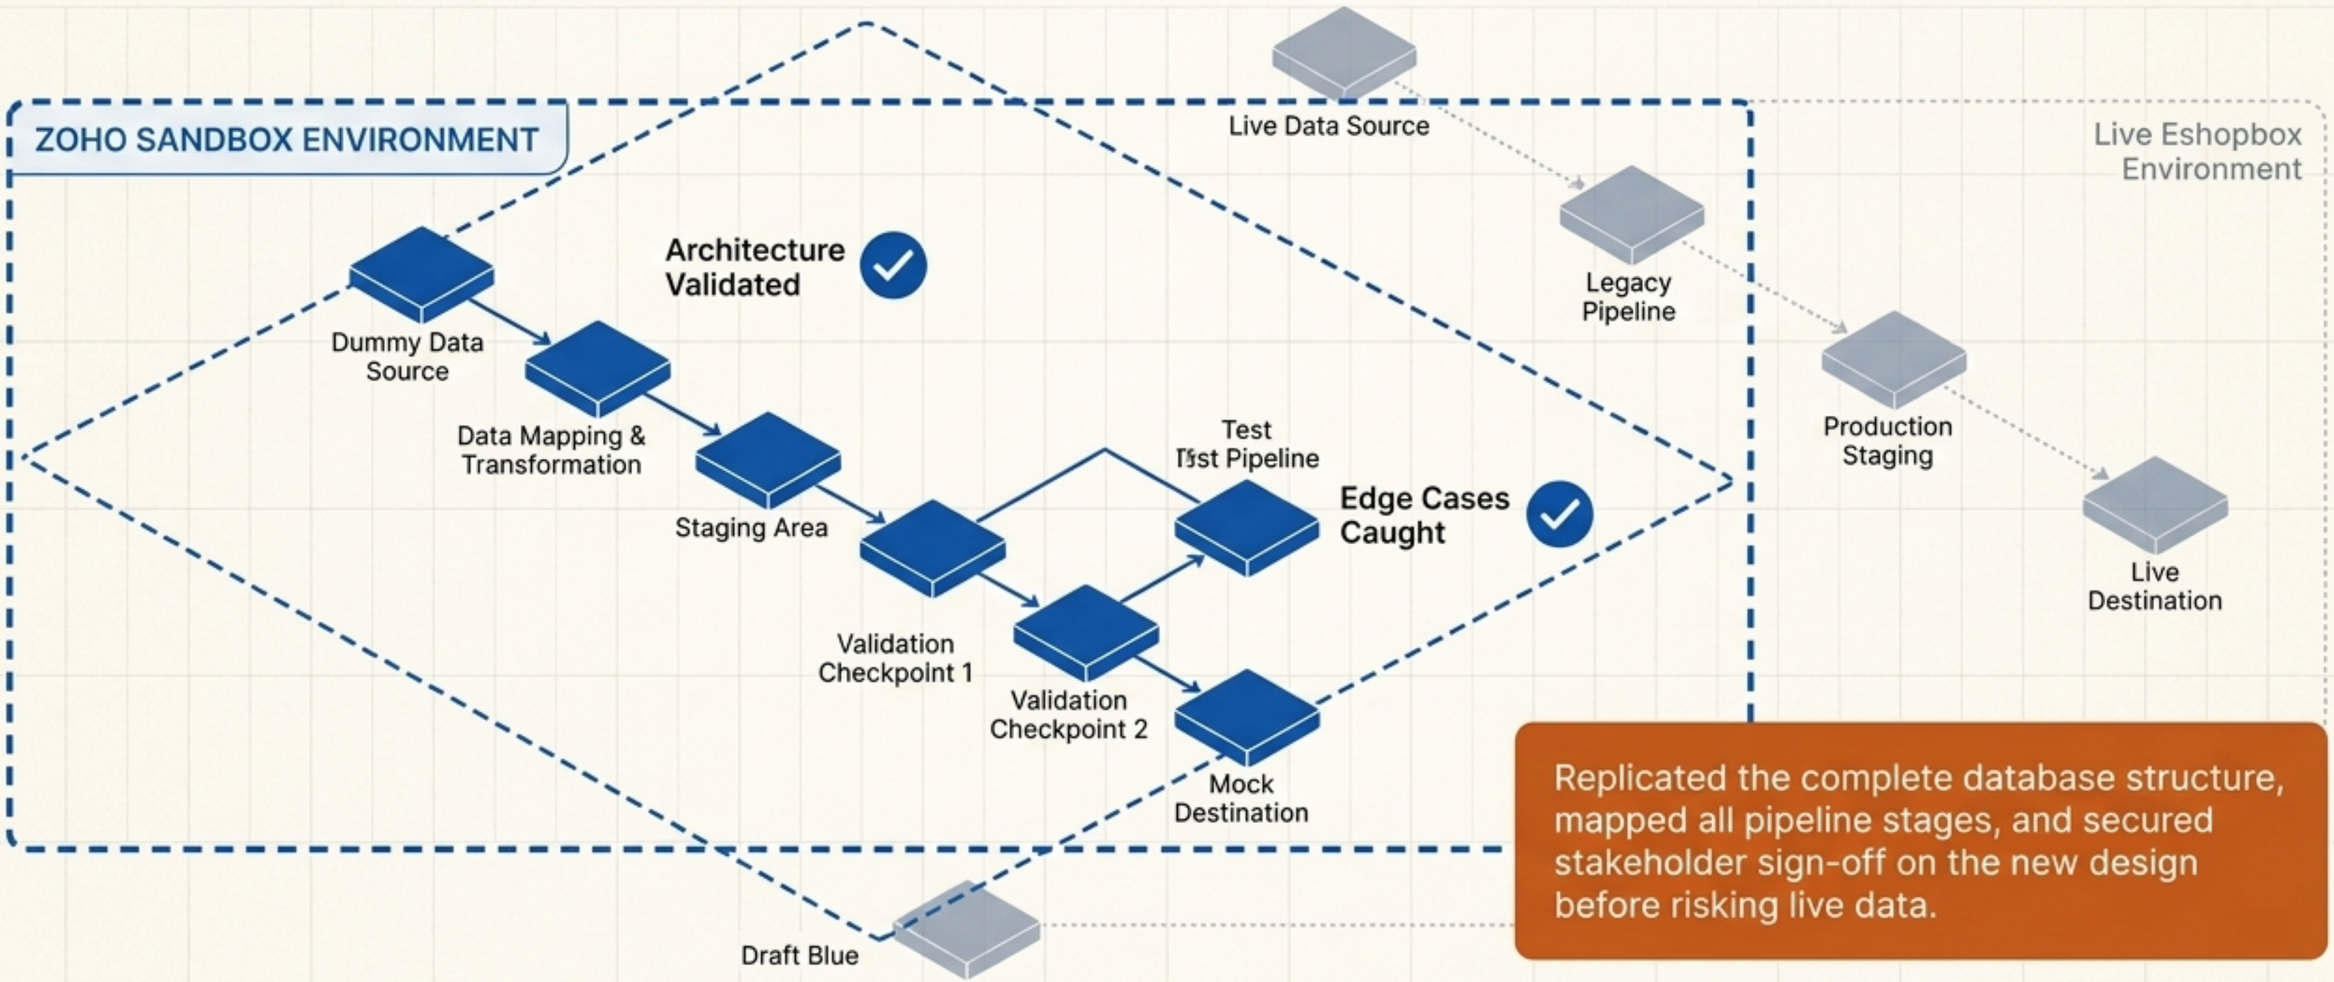

CSM & Leadership:

Unable to calculate true CAC and LTV.

Lost enterprise clients due to blind spots.

NotebookLM

VALIDATING THE ARCHITECTURE BEFORE TOUCHING LIVE DATA

Replicated the complete database structure, mapped all pipeline stages, and secured stakeholder sign-off on the new design before risking live data.

NotebookLM

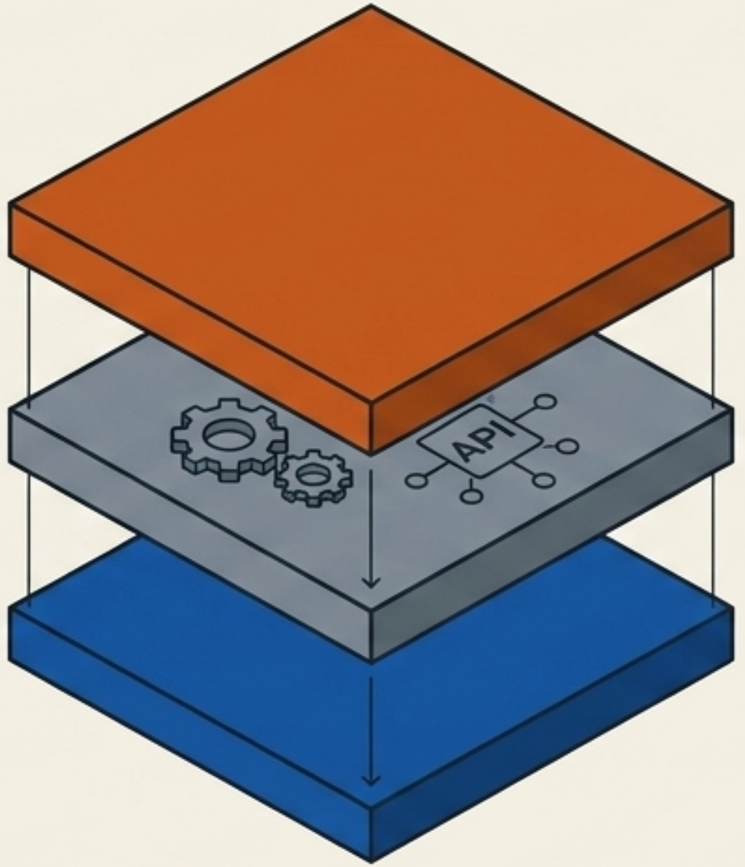

A THREE-LAYERED TRANSITION TO AN AUTOMATED ECOSYSTEM

Structural Redesign

Shifting the North Star Metric to shipment volume and separating SDR/AE roles to eliminate cognitive switching.

Clean Data via AI

Python-assisted scripts to deduplicate, normalize, and migrate 70,000+ contacts and 8,000+ deals from HubSpot to Zoho.

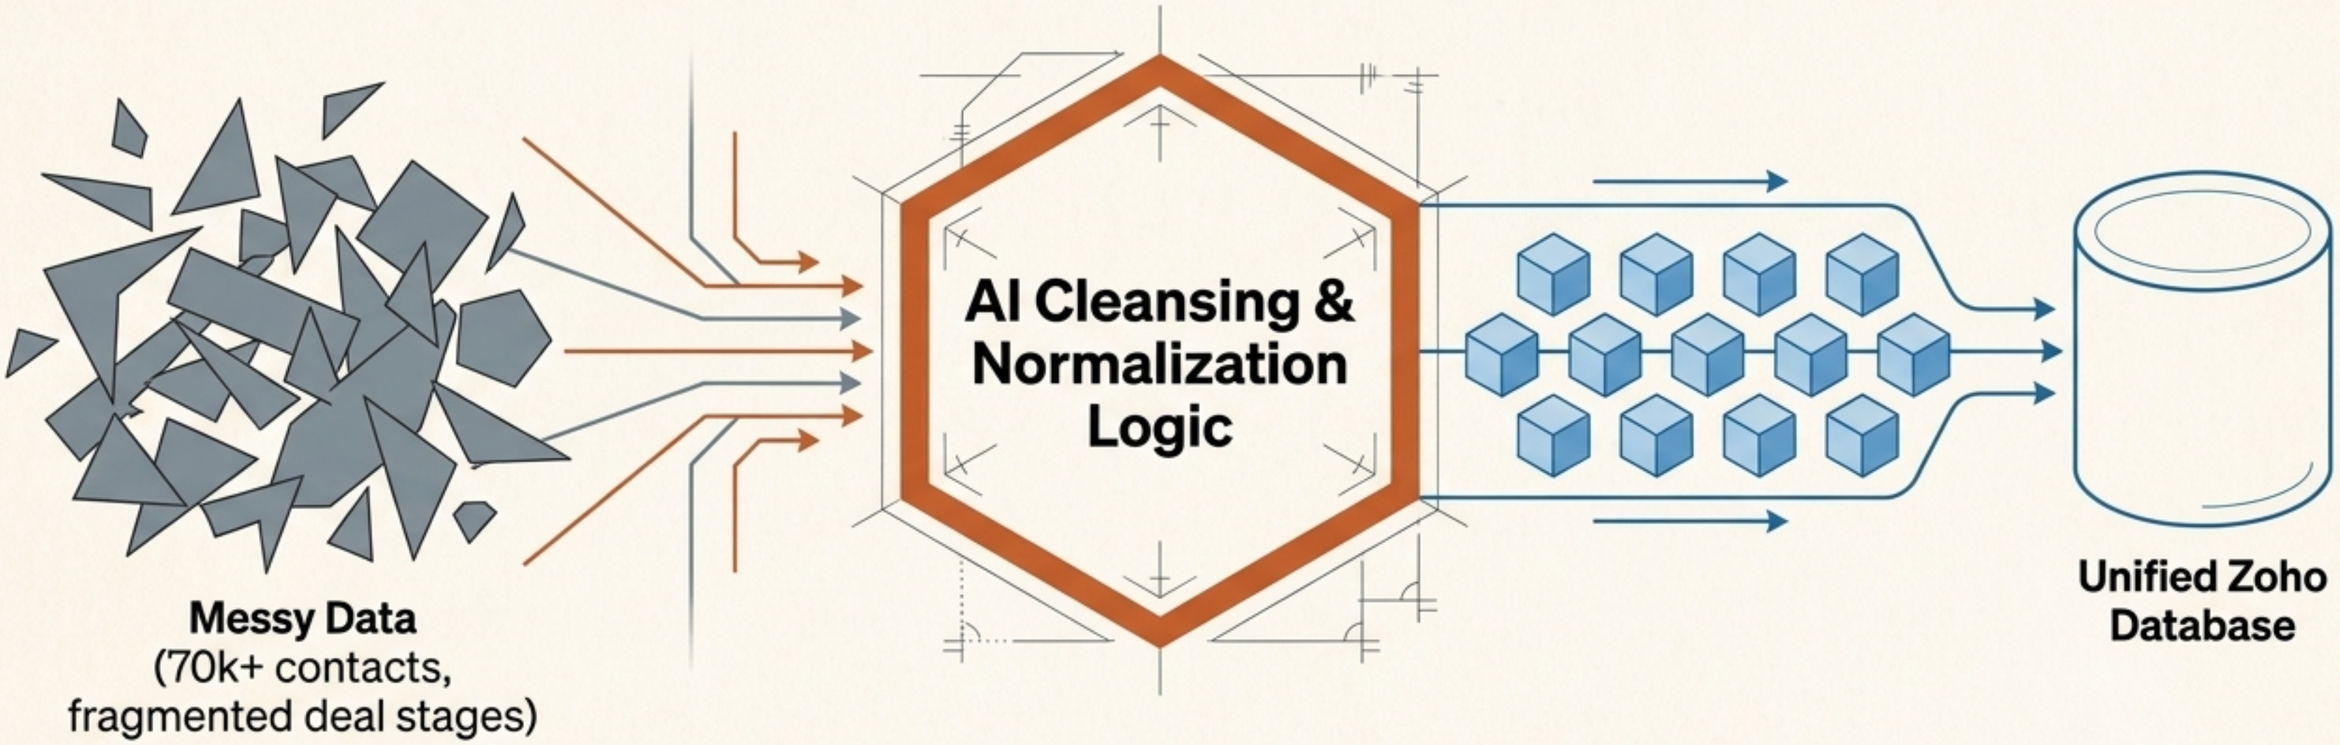

Workflow Automation

Webhooks and APIs connecting Zoho to the Eshopbox app for zero-latency, automated KYC and onboarding.

NotebookLM

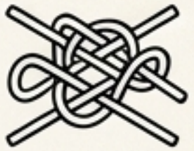

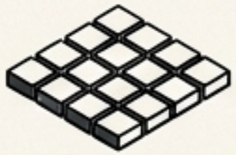

STRUCTURED DATA IS THE PREREQUISITE FOR AI UTILITY

Defining the exact tracking metrics and source of truth allowed AI to rebuild a coherent database, rather than just migrating garbage.

NotebookLM

Realigning human incentives to match system architecture

	The Old World 	The New Engine 
Sales Role	Full-cycle (Hunter + Farmer context switching)	**SDR / AE Split** (Optimized for discrete task throughput)
Onboarding	Manual retyping of CRM data	**Asynchronous Webhook / API Automation**
Target Metric	Vanity Signups (Cost Center)	**Active Shipment Volume** (Profit Center)
Sales Incentive	Paid on brand closures (Logo acquisition)	**Paid on shipment revenue potential**

NotebookLM

Building the growth engine that enabled scale

19%

Month-over-month revenue growth driven by better lead quality and aligned incentives.

60%

Reduction in CRM subscription costs (plus ₹4 Lakh saved in zero-agency-fee execution).

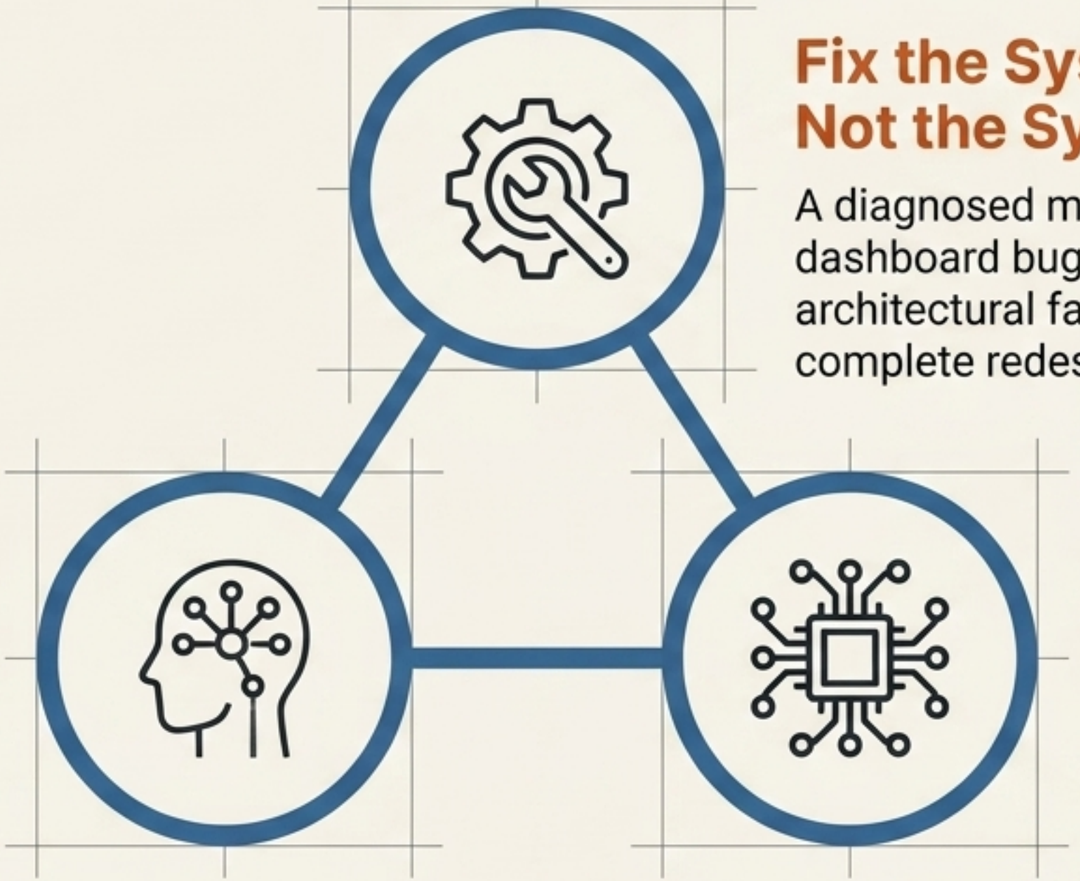

80%

Reduction in sales cycle time through zero-latency webhook automation.

Leadership finally gained a single source of truth to calculate true CAC and LTV.

NotebookLM

The biggest product wins come from reframing the problem

Fix the System, Not the Symptom.

A diagnosed metric drop wasn't a dashboard bug; it was a fundamental architectural failure requiring a complete redesign.

Internal Empathy.

Mapping the pain points and incentives of internal teams (Sales, Marketing, Ops) with the same rigor used for external customers.

AI as a Multiplier.

AI accelerates execution (scripting, cleansing, querying), but deep product thinking and problem framing remain the critical human layers.
